Sequence 12, Application US/08852091

Patent No. 588328

GENERAL INFORMATION:
APPLICANT: 21long Wen
APPLICANT: 21long Wen
APPLICANT: Zhong Zhong
TITLE OF INVENTION: FUNCTIONALLY ACTIVE REGIONS OF SIGNAL
TITLE OF INVENTION: TRANSDUCER AND ACTIVATOR OF TRANSCRIPTION (STAT) PROTEINS
NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
ADDRESSEE: Klauber & Jackson
STREET: Hackensack Avenue
CITY: Hackensack
STATE: New Jersey

Rivamamoto, K.; Ouelle, F.W.; Thierfelder, W.E.; Kreider, B.L.; Gilbert, D.J.; Jenkins, Mol. Cell. Biol. 14, 434-4349, 1994
A;Title: Stat4, a novel gamma interferon activation site-binding protein expressed in e A;Reference number: A56047
A;Accession: A56047
A;Status: preliminary; nucleic acid sequence not shown
A;Molecule type: mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A;Cross-references: UNIPROT:P42228; GB:U09351; NID:g509502; PIDN:AAA19692.1; PID:g50950 C;Superfamily: human signal transducer and transcription activator STATSA C;Keywords: DNA binding; phosphoprotein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      309
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121 ACIGGPPNICLDRLENWITSLAESQLQTRQQIKKLEELQQKVSYKGDPIVQHRPMLEERI 180
                                                                                                                                 "Transcription factors Stat3 and Stat5b are present in rat liver nuclei late in an acute phase response and bind interleukin-6 response
                                                                                                                                                                                                                                                                                                                                                                           ACUTE-Phase protein genes.

PATHWAY: Involved in the gp130-mediated signaling pathway.

PATHWAY: Involved in the gp130-mediated signaling pathway.

SUBNIT: Forms a homodimer or a heterodimer with a related family member (at least STATI). Interacts with NCOAI (By similarity).

SUBCELLUIAR LOCATION: Cytoplasmic; translocated into the nucleus in response to phosphorylation (By similarity).

FTM: Tyrosine phosphorylated in response to IL-6, IL-11, CNTF, LIF, CSF-1, EGF, PDGF, IN-alpha and OSM. Serine phosphorylation is important for the formation of stable DNA-binding STAT3 homodimers and maximal transcriptional activity (By similarity).

SIMILARITY: Belongs to the transcription factor STAT family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ACIGGPPNICLDRLENWITSLABSQLQTRQQIKKLBELQQKVSYKGDPIVQHRPMLBERI

The STATS-encoding gene was flipped across the STAT3/STAT5A-locus

The Thuring ruminant evolution.";

Submitred (JAN-2004) to the EMBL/GenBank/DDBJ databases.

- FUNCTION: Transcription factor that binds to the interleukin-6

- I- FUNCTION: Transcription factor that binds to the interleukin-6

- I- FUNCTION: Transcription factor with pathway.

- STBUNIT: Forms a homodimer or a heterodimer with a related family member (at least STAT1). Interacts with NCOA1 (By similarity).

- SUBCLIGUAR LOCATION: Cytoplasmic, translocated into the nucleus in response to phosphorylation (By similarity).

- SIMILARITY: Contains 1 SH2 domain.
